Overview

The taccor is a unique turn-key femtosecond laser with a 1 GHz or 10 GHz repetition rate that delivers up to 1.8 W of average power in pulses that can be <20 fs. Tuneability is offered between 740 nm and 930 nm. Its innovative design combines a compact hermetically sealed, vibration-resistant laser head that incorporates the Ti:Sapphire oscillator and pump laser, with a full-feature control unit. The control unit houses the field replaceable pump diodes, isolating temperature effects from the taccor itself, and provides intelligent control that monitors laser performance and carries out diagnostics analysis. The result is a highly stable and reproducible product with a long lifetime and low cost of ownership.

There are five versions of the taccor: The taccor one offers a selectable (fixed) wavelength; the taccor power and taccor ultra are tuned to produce the highest power or the shortest pulse duration respectively; the taccor tune offers the flexibility of a tuneable wavelength using a touch screen or control software and the taccor x10 operating at a 10 times higher repetition rate.

Optional features

Active locking of repetition rate and pulse timing

The TL-1000 is an optional supporting unit that enables tight phase-locking of the repetition rate to an external reference with jitter <100 fs. TL-1000-ASOPS enables a repetition rate offset lock between two GHz oscillators of 2 kHz to 20 kHz allowing ultrafast time-domain spectroscopy without a mechanical delay stage.

Pulse train monitoring

An integrated high bandwidth (10 GHz) photodiode can be used for repetition rate monitoring and to supply a signal to the TL-1000 units or external electronics.

Repetition rate control

Control of the repetition rate and active feedback is enabled by cavity mirrors mounted on a fast and slow piezo crystal enabling rapid feedback and drift control simultaneously; in combination with the TL-1000 unit, this offers precision closed loop stabilisation of the repetition rate. Alternatively, the piezos can be driven by customer supplied electronics.

CEPloQ™ technology

CEPloQ™ is our patented technology that directly modulates the pump power to maintain phase stabilisation without the use of an AOM. This leads to faster and more stable responses than the traditional method.

The taccor is compatible with the Laser Quantum RemoteCom software that allows connection to the Laser Quantum support team for monitoring laser performance and diagnosing opportunities for carrying out laser optimisation.

Pump power modulation

Modulation access to the pump power with a bandwidth of >100 kHz and modulation depth up to ±1% is provided for feedback purposes.
taccor one

The **taccor one** offers a selectable (fixed) wavelength between 740 nm to 920 nm within a compact design and is both self-mode-locking and stable. At 1 GHz repetition rate, the **taccor one** delivers more than 1.6 W of average power with a pulse duration of <60 fs.

![Stacked spectra indicating the wavelength coverage of the taccor one.](image1)

Living mouse neuron imaged with the **taccor one**.

**taccor power**

The **taccor power** is optimised for the highest possible output, offering up to 1.8 W at the Ti:Sapphire gain maximum around 800 nm.

![3D beam profile from a taccor series laser.](image2)

**taccor x10**

The high repetition rate (10 GHz) version of the **taccor**. Giving up to 1 mW per comb line spaced by 10 GHz, the **taccor x10** is unique to the market and opens a wide field of new applications such as resolved mode spectroscopy, low-noise microwave generation, astrocombs or arbitrary waveform generation. Analogue to the other version of the **taccor**, the **taccor x10** can also be configured to allow the control of the repetition rate and gives modulation access for the pump power to enable an easy control of the carrier offset frequency.

![RF spectrum showing the f_{CEO} beat, the difference frequency of the repetition rate with the f_{CEO} beat and the repetition rate. The noise floor is given by the spectrum analyser. The zoom in shows the f_{CEO} beat without limitation by the spectrum analyser.](image3)

1.8 W
**taccor tune**

The **taccor tune** offers the flexibility of a tuneable wavelength using a touch screen or control software; a true hands free laser covering the wavelength regime from 740 nm to 930 nm which is unique to the market.

*(example shown is taccor tune 10).*

**taccor ultra**

The **taccor ultra** produces the shortest pulse duration within the family. With a 1 GHz repetition rate and delivering 1.6 W of average power, the pulses can be as short as <20 fs.

**Additional capabilities**

**taccor comb**

The **taccor comb** consists of an f-to-2f interferometer module, locking electronics from Menlo Systems, and either a **taccor power** or **ultra**. The **taccor** is fully stabilised in repetition rate and carrier-envelope offset frequency; in this configuration, the **taccor** is a powerful frequency comb engine offering >1 W stabilised comb average power, centred at 800 nm, with pulse durations of <30 fs available for spectroscopy and metrology applications. The 800 nm beam can be used directly or to drive up to two further nonlinear broadening stages to facilitate optical frequency measurements, direct comb spectroscopy, spectrograph calibration, dual-comb linear or non-linear spectroscopy and many other applications.

**Second harmonic generation**

Together with A-P-E Angewandte Physik & Elektronik GmbH, Laser Quantum can offer the HarmoniXX second harmonic frequency converter for use with the **taccor power**. Maintaining the benefits of the 1 GHz repetition rate, it offers up to 250 mW of frequency doubled output.

**Pre-chirp module**

Careful control of the group delay dispersion (GDD) of an optical setup is crucial to obtaining the desired results from many applications using femtosecond lasers. Our **pre-chirper** allows for GDD control from ~0 to -8600 fs$^2$ enabling the user to easily compensate for the positive GDD of the setup and obtain the right pulse characteristics at the point of use.

For full details of these options, please see the dedicated data sheets.
Dimensions (mm)

Other information
- Umbilical length: 2 m
- Head weight: 15 kgs
- Cooling system included
- Warm-up time: 10 minutes
